

## Appendix 4

Evaluating trade-offs in spatial versus temporal replication when estimating avian community composition and predicting species distributions

**Fig A4.1.** Correlation length (km) for species for which we fit species distribution models. Associated species 4-letter codes, common names and genus species are reported in Appendix 2, Table A2.1.

**Fig A4.2.** Spatial correlation between adjacent secondary sampling units for species for which we fit species distribution models. Associated species 4-letter codes, common names and genus species are reported in Appendix 2, Table A2.1.
