

Appendix 14. The relationship between the total number of minutes sampled at each site for calling birds from autonomous recording units (ARUs) and the mean number of calling birds/min of 37 bird sampling sites in southeastern Ontario, Canada. Each data point represents data from one site. There was no relationship between the number of minutes sampled and the dependent variable. Pearson's $r = -0.149$, $p = 0.378$.
